RESEARCH EXPERIENCE

Research Assistant, work for Prof. GENG Xuesong at Singapore Management University Dec.2020-Dec. 2021

- Collected and cleaned the data of VC background Chinese and American AI companies, collected and cleaned the data of Apple patents, established the comparison group and database;
- Collected the data of patents of embargoed Chinese companies, collected the basic information of embargoed Chinese companies, cleaned the data for further AI process;
- Assisted in case writing about REC company and MediaCrop, translated cases into Chinese.

SRTP: Investigation and Policy Research on Talent Introduction in Chongqing Jun.2018-Aug. 2019

- Through literature search and questionnaires, led team to compare the talent strategies of typical eastern and western cities, establish index weights by AHP method and study the talent attraction model of Chongqing's policies;
- Improved communication skills, material collection and model building, put forward suggestions on the introduction and training of high-level talents in Chongqing.

RESEARCH FOCUS

Environmental economics, Energy economics, China Energy Transition

- The primary research focuses on the power system transformation during China's energy transition. China heavily relies on coal power, a major contributor to carbon emissions. As China aims to increase electrification and achieve its carbon peak and neutrality goals, addressing the urgent issue of low-carbon transformation in the power system becomes imperative.
